

# Multiplication Combinations 1

Multiply each number in the first column of the table with the number at the top. For example, the answer for the first blank space in Table A is 14, which is  $2 \times 7$ . Circle any combinations you do not know immediately, and record them on *Student Activity Book* page 10.

**NOTE** Fifth-grade students are expected to know their multiplication combinations (facts). This page helps students determine whether they remember their combinations and identify any combinations they still need to practice.
