## ***Addition Compare with Fractions*** Directions

### **You need**

o Fraction Cards (1 deck per pair)

### **Play with a partner.**

- 1** Divide the deck of cards evenly so that both players have the same number of cards. Place the cards face down in a stack in front of you.
- 2** Each player turns over the top two cards in their stack.
- 3** Determine which player has the greater sum. Discuss how you know which sum is greater.
- 4** The person with the greater sum takes all of the cards that have been turned over and places them at the bottom of their stack.
- 5** If the sums are equal, players turn over two new cards. The person with the greater sum takes all of the cards.
- 6** Play for a given amount of time or until one player has all of the cards. The player with more cards wins.
